

Operating Model Assessment Tool

SCREEN TOUR

A guided tour of every part of the tool, using the demonstration engagement for Tallowood Water Services (a fictional water utility). Screens follow the toolkit's phases: mobilise, plan, discover, assess, design, business case, compare and report.

Contents

Open the tool by double-clicking **CTO_Operating_Model_Assessment_Tool.html**; it runs in the browser, offline, and saves work automatically in that browser. Use the left-hand menu to move between screens.

CTO CONSULTING · BUSINESS ANALYSIS PRACTICE

Operating Model Assessment Toolkit

A structured toolkit for an exhaustive assessment of how an organisation delivers value: its strategy, customers, services, processes, capabilities, structure, governance, people, culture, performance management, technology, data, suppliers, locations, risk and compliance, finances and change capability. It combines a 157-question maturity diagnostic across 17 dimensions with the planning tools, current-state inventories, analysis and outputs needed to move from evidence to a prioritised set of recommendations.

Tallowood Water Services 2.3 / 5 100% 22 21

OPEN ENGAGEMENT · RECOMMENDATIONS CURRENT MATURITY · DEVELOPING QUESTIONS SCORED FINDINGS AI READINESS INDEX

Open dashboard + New engagement Download report (PDF)

How to use the toolkit

STEP 1
Mobilise
Client details, objectives, scope, hypotheses, design principles and settings.

STEP 2
Plan
Register stakeholders, tailor interview guides and issue document requests.

STEP 3
Discover
Capabilities, processes, structure, decision rights, applications, suppliers, locations and costs.

STEP 4
Assess
Score 157 questions across 17 dimensions, assess AI readiness and log findings.

STEP 5
Analyse
Review the dashboard: maturity profile, gaps, RAG, findings and inventory health.

STEP 6
Design
Design the target operating model, prioritise recommendations and plan the transition.

STEP 7
Business case
Track costs and benefits of initiatives and solution components; NPV, ROI, payback.

STEP 8
Compare & report
Compare current and target operating models and download the PDF report.

Engagements

Each engagement is a complete, independent assessment of one organisation. Data is saved automatically in this browser.

Import (.xlsx or .json) Add demo engagement

+ New engagement

CLIENT	ENGAGEMENT	STATUS	LAST UPDATED

Complete this first. Settings drive calculations across the tool: default target maturity, RAG thresholds, prioritisation, span and layer checks, expiry warnings, TIME classification and the business case.

Engagement details Objectives & scope Hypotheses Design principles 7 Assessment settings

Assessment settings

From the workbook's Engagement tab

SETTING	VALUE	HOW IT IS USED
Default target maturity (1-5)	3	Pre-fills the Target Maturity column on the Assessment tab. Overwrite individual questions where the target differs.
RAG: Red when maturity gap is at least	1.5	Gap = target minus current. Applied to questions and dimension averages.
RAG: Amber when maturity gap is at least	0.75	Gaps below this threshold are Green.
Prioritisation threshold (Value and Ease, 1-5)	3	Recommendations with Value and Ease at or above this score are Quick wins; high Value / low Ease are Strategic initiatives.
Maximum management layers (CEO = layer 1)	6	Org Structure flags business units whose deepest reporting line exceeds this.
Contract / lease / support expiry warning (days)	180	Flags suppliers, leases and applications approaching expiry.

8. Interview guides

72 interview questions for ten stakeholder groups, mapped to dimensions, with probes and a notes field for each question. Add tailored questions for any group.

The screenshot displays the 'Interview guides' section of the CTO Consulting Operating Model Assessment tool. The interface is divided into a left sidebar, a main content area, and a right sidebar.

Left Sidebar: Contains navigation links for OVERVIEW, Engagements, Dashboard, 1 · MOBILISE (Engagement setup), 2 · PLAN (Stakeholders, Interview guides, Document requests), 3 · DISCOVER (Capabilities, Processes, Org structure, Decision rights, Applications, Suppliers, Locations, Cost baseline), 4 · ASSESS (Maturity assessment, AI readiness, Findings), and 5 · DESIGN.

Main Content Area:

- ENGAGEMENT:** Tallowood Water Services (demo)
- STEP 2 · PLAN:** Interview guides
- Description:** Core questions for ten stakeholder groups, mapped to dimensions. Tailor them before each interview and record notes against each question.
- Opening and closing (use in every interview):** explain the purpose and confidentiality of the interview; ask the interviewee to describe their role; close by asking 'What have I not asked that I should have?' and 'Who else should we speak to?'.
- Stakeholder Groups:** Board / Chair (7), CEO & Executive Leadership (8), Business Unit & Operations Leaders (8), Team Leaders & Frontline Staff (8), CFO & Finance (7), CHRO & People (7), CIO, Technology & Data (8), CRO, Risk, Compliance & Audit (7), Procurement & Supplier Management (6), Customers & External Partners (6).
- Board / Chair (7 questions):** Includes a search bar, a dropdown for 'All dimensions', and a '+ Add question' button.
- Question 1:** 'What are the organisation's most important priorities over the next three to five years, and how confident are you that it can deliver them?' (D01 Strategy). Probe: Which priorities are most at risk, and why? Includes an 'Interview notes' field.
- Question 2:** 'How well does the information the board receives support decisions on strategy, performance and risk?' (D07 Governance, D10 Performance). Probe: What would you like to see more or less of? Includes an 'Interview notes' field.

Right Sidebar:

- Stakeholders in this group:** Board Chair (10 Aug 2026, Completed).
- Coverage by dimension:** Questions in this guide per dimension. A grid shows coverage for dimensions D01 through D17.

D01 Strategy & Direction 9/9 scored

Current 2.6 Target 3.9 Gap 1.3 ▼

The organisation's purpose, strategic objectives and the explicit choices the operating model must enable. *Key question: Is it clear what the operating model must deliver, and are the strategic choices explicit?*

1 · INITIAL
No articulated strategy, or it exists only in the heads of a few leaders. Priorities shift frequently.

2 · DEVELOPING
Strategy documented but high level. Objectives are unclear or unprioritised; awareness is limited beyond the executive.

3 · DEFINED
Clear strategy with measurable objectives and agreed design principles, cascaded into business plans.

4 · MANAGED
Strategy drives portfolio, budget and operating model decisions. Progress reviewed quarterly and adjusted.

5 · OPTIMISED
Adaptive, evidence-led strategy informed by continuous scanning. The whole organisation understands and contributes to it.

D01.01 PURPOSE & VISION
Red Is there a clearly articulated purpose, vision and mission that is understood across the organisation?

What good looks like: Purpose and vision are documented and current. Staff at all levels can explain them and how their work contributes.

2030 strategy is well articulated but objectives are not prioritised and trade-offs are implicit.

Structure, sourcing & f

Target operating model vision

A customer-focused, digitally enabled water utility that delivers safe, reliable services at the lowest sustainable cost — organised around end-to-end value streams, supported by shared services and trusted data, and able to adopt AI safely.

Design principles

DP01 Customer first Agreed
Design journeys end to end from the customer perspective; measure experience, not just activity.

DP02 Standardise unless differentiating Agreed
Common processes and systems across units; local variation requires a documented case.

DP03 Digital by default Agreed
Self-service first, assisted channels for complex and vulnerable customers;

Structural archetype

Selected archetype
Hub-and-spoke (federated)

When it fits
Common standards and platforms are needed while business units retain local delivery.

Strengths
Consistency with local responsiveness; scalable capability building.

Watch-outs
Requires clear decision rights and funding rules between hub and spokes.

Rationale for the choice
Divisions retain accountability for service delivery (spokes) while common standards, platforms, data, shared services and centres of excellence sit in the hub. This balances local responsiveness in depots and plants with the consistency and scale the price path

5 · DESIGN

Operating Model Assessment Report

Tallowood Water Services

Operating Model Review 2026 · 29 Sep 2026 · Version 0.8 · Commercial in confidence

Executive summary

Tallowood Water Services' operating model scores 2.3 out of 5 (Developing) against a target of 3.4, an average gap of 1.2 (Amber). 6 of 17 dimensions are rated Red.

CURRENT MATURITY 2.3 Developing	TARGET 3.4	FINDINGS 22	AI READINESS 21
---	-----------------------------	------------------------------	----------------------------------

The strongest dimensions are Locations & Physical Assets (3.6), Products & Services (2.7) and Risk, Compliance, Security & Resilience (2.6). The largest importance-weighted gaps are in Data, Information & Analytics (gap 2.7), Governance & Decision Rights (gap 1.9), Value Streams & Processes (gap 2.3) and Performance Management & Planning (gap 1.7), which should anchor the target operating model design.

22 findings were logged (3 critical, 10 high, 8 medium, 1 low), 13 of them critical or high and still open. 19 recommendations have been prioritised by value and ease.

The current state comprises 1,285 FTE with an average span of control of 8.1 and up to 7

Framework, maturity model & lists

17 dimensions synthesised from the Operating Model Canvas (POLISM), McKinsey 7S, the Galbraith Star Model and TOGAF / BIZBOK business architecture.

Framework (17 dimensions)

Maturity model

Assessment approach

AI readiness framework

Dropdown lists

CODE	DIMENSION	1 - INITIAL	2 - DEVELOPING	3 - DEFINED	4 - MANAGED	5 - OPTIMISED
All	Generic scale	Ad hoc, undocumented and person-dependent. Outcomes are unpredictable and largely reactive.	Some practices are defined but applied inconsistently. Limited measurement; still largely reactive.	Practices are documented, standardised and applied consistently across the organisation.	Practices are measured and actively managed against targets. Decisions are data-driven.	Continuous improvement is embedded. Leading practice that adapts quickly to change.
D01	Strategy & Direction	No articulated strategy, or it exists only in the heads of a few leaders. Priorities shift frequently.	Strategy documented but high level. Objectives are unclear or unprioritised; awareness is limited beyond the executive.	Clear strategy with measurable objectives and agreed design principles, cascaded into business plans.	Strategy drives portfolio, budget and operating model decisions. Progress reviewed quarterly and adjusted.	Adaptive, evidence-led strategy informed by continuous scanning. The whole organisation understands and contributes to it.
D02	Customers, Channels & Value Proposition	Limited understanding of customers. Services are designed around internal structures.	Basic segmentation. Feedback is collected but rarely acted upon; channels are managed in silos.	Defined segments, value propositions and key journeys. Channel strategy and voice-of-customer program in place.	Journeys owned and measured end to end. Consistent omnichannel experience; insight drives service change.	Customer-centric by design. Predictive insight personalises services and customers co-design improvements.
D03	Products & Services	No complete view of products and services. Ownership is unclear.	Catalogue exists but is incomplete. Performance data is partial and launches are ad hoc.	Complete catalogue with owners, a defined lifecycle process and tracked performance.	Portfolio actively managed on value and cost, with regular rationalisation and a strategy-linked pipeline.	Portfolio continuously optimised using customer and financial insight; rapid test-and-learn development.
D04	Value Streams & Processes	Processes are undocumented and person-dependent, with high variation and rework.	Some processes documented. Ownership is functional and measurement is limited.	Process architecture defined. Key processes documented, owned and measured with KPIs.	End-to-end process owners manage performance. Processes are standardised and automation is applied systematically.	Processes continuously optimised using data (e.g. process mining), with intelligent automation at scale.
D05	Business Capabilities	No capability view.	A capability map has been created.	Endorsed capability map.	Capability-based planning.	The capability model is the
